Quality Policy

Offshore Energy UK Limited is committed to maintaining a quality management system (QMS) across the oil and gas, renewables, telecommunications, and marine industries in which it operates. The QMS enables Offshore Energy and its companies to:

- Meet requirements for complying with relevant national, international and local (i.e. site-specific) legislation;
- Meet requirements for complying with quality standards which the company deems applicable and subscribes to, such as those set by the International Organisation for Standardisation (ISO) and relevant industry bodies;
- Achieve the aims of industry guidance and best practice which the company deems applicable and subscribes to;
- Identify and effectively manage risks and opportunities;
- Identify and consistently meet client requirements;
- Set appropriate quality objectives for all levels of operation which are in line the company's purpose and strategic direction.

Offshore Energy UK Limited makes a further commitment to continuously evaluate the effectiveness of its QMS using recognised improvement methodology, such as the Plan – Do – Study – Act cycle, and to take timely action to improve its quality function. This includes taking account of:

- Outcomes of evaluations;
- Performance against set targets and achievement of planned outcomes;
- The potentially differing views about quality that interested parties hold, i.e. those which may have an impact on and / or be impacted by Offshore Energy's QMS; and
- The internal, national, international and local (site) circumstances in which the company is operating.

Meeting these commitments supports a culture of quality and improvement within Offshore Energy UK Limited and its companies, and among its clients and sub-contractors. Offshore Energy endeavours to work with like-minded organisations to ensure that its activities deliver high quality, customer-focused products and services.
