Integrated Management System Policy

Offshore Energy UK Limited maintains an integrated management system (IMS) which captures its activities in relation to health, safety, environment and quality (HSEQ), information security, business continuity and meeting client requirements. The IMS aims to integrate the company's systems and processes into a single framework which enables a unified approach to achieve the company's strategic vision and objectives.

The IMS is based on the fundamental principles of risk management, and planning, testing, reviewing and acting to support continual improvement. It meets the requirements of current ISO standards.

The suitability of the IMS, the policies and procedures contained within it, and working practices are regularly reviewed in conjunction with the views of interested parties, i.e. those who may have an impact on or be impacted by the company's activities, and the national, international and local (site) circumstances in which the company is operating.

Richard Turnbull
